

BUSINESS INFORMATION SYSTEM

We turn **data** into innovation

BSS ERP brings finance, warehouse, manufacturing, retail and HR into a single platform. One entry, one source of truth, reports in real time — from a desktop, tablet or phone.

OUR PRODUCT

One system for the whole company

Instead of five disconnected programs and spreadsheets that never agree, BSS ERP holds the entire business in one system. It is modular: start with what you need today and add modules as the company grows.

- ✓ Runs in the browser — no install on every workstation
- ✓ Sign in with a password, a PIN or a fingerprint
- ✓ Access rights per user and per module
- ✓ Cloud or on your own server, your call
- ✓ Unlimited branches and warehouses
- ✓ Automatic backups and an audit trail on every change

THE BSS ERP DASHBOARD (DEMO DATA)

MODULES

Everything a company actually uses

Switch on only what you need. Every module shares the same data — nothing gets entered twice.

01 General ledger Ledger, subledgers, open items, statements of account, automatic posting and period close.	02 Inventory & warehouse Costings, price changes, receipts, delivery notes, transfers and stocktaking per location.	03 Retail & POS Fast touch selling, fiscal receipts, cards, discounts, loyalty cards and shift handling.
04 Wholesale & sales Quotes, orders, invoices, per-customer price lists, discount policy and credit limits.	05 Manufacturing Bills of materials, work orders, raw-material consumption, semi-finished goods and costing.	06 Payroll & HR Employees, contracts, time tracking, payroll, contributions and statutory forms.
07 VAT records Input and output VAT books, VAT return, incoming and outgoing invoices — ready to file.	08 Fixed assets Asset register, depreciation, small inventory and per-employee assignment.	09 Cash desk & bank Domestic and foreign-currency cash desk, bank statements, automatic payment matching.
10 CRM & service Contacts, activities, open opportunities, service orders and warranties.	11 Business analytics Dynamic reports, period comparison, top items and customers, export to Excel.	12 e-Invoicing & integrations Document exchange, web shop, banks and fiscal devices through an open API.

Fiscalisation & retail

A sale at the till releases stock, prints the fiscal receipt and posts the turnover automatically. Nothing is retyped, and the till and the books do not disagree at month end.

Hardware & equipment

Software is half the job. The other half is hardware that has to survive daily use. We pick it, configure it and maintain it together with the system.

HOW A ROLLOUT WORKS

01

Analysis

We sit down with you, map the document flows and pin down what the system has to solve.

02

Implementation

We set up modules, code lists, access rights and posting rules the way your company works.

03

Data migration

Code lists, balances, partners and open items are carried over from your current program.

04

Training

Users are trained by role — sales, warehouse, accounting, management.

05

Support

Phone, remote assistance and on-site visits. Upgrades and legal changes are included.

PLANS

Start

Small companies, sole traders and single-location hospitality.

- Retail and POS with fiscal receipts
- Inventory and costings
- Basic bookkeeping and cash desk
- One branch, up to 2 users
- Email and remote support

Standard

Retail and service companies with several branches and in-house accounting.

- Everything in Start
- Wholesale, quotes, orders and price lists
- VAT books and VAT return
- Fixed assets, bank and foreign currency
- Unlimited branches, up to 10 users

Enterprise

Manufacturing, distribution and retail chains with specific requirements.

- Everything in Standard
- Manufacturing, BOMs and work orders
- Payroll and HR records
- CRM, service orders and business analytics
- API, e-invoicing and third-party integrations

Every plan includes the rollout, migration of your existing data and user training. Regulatory changes and upgrades are never billed separately.

Book a demo — 30 minutes, no obligation.
